Customer Shopping Behavior Analysis

1. Project Overview

This project involves analyzing transactional data—specifically, 3,900 customer purchases across diverse product categories—to map customer shopping behavior. The primary objective is to generate insights regarding spending patterns, key customer segments, product preferences, and subscription activities. These findings will directly inform and guide strategic business decision-making.

2. Dataset Summary

The dataset used for this analysis comprises 3,900 rows and 18 distinct columns.

The key features captured include:

- **Customer Demographics:** Age, Gender, Location, and Subscription Status.
- **Purchase Details:** Item Purchased, Product Category, Purchase Amount, Season, Size, and Color.
- **Shopping Behavior Metrics:** Discount Applied, Promo Code Used, Previous Purchases, Purchase Frequency, Review Rating, and Shipping Type.

A minor data cleaning requirement exists, as 37 values are currently missing in the Review Rating column.

3. Exploratory Data Analysis using Python

We began with data preparation and cleaning in Python:

- **Data Loading:** Imported the dataset using **pandas**
- **Initial Exploration:** Used **df.info()** to check structure and **.describe()** for summary statistics.

	Customer ID	Age	Gender	Item Purchased	Category	Purchase Amount (USD)	Location	Size	Color	Season	Review Rating	Subscription Status	Shipping Type	Discou Appli

NaN	NaN	50.000000	NaN	NaN

- **Missing Data Handling:** Checked for null values and imputed missing values in the **Review Rating** column using the median rating of each product category.
- **Column Standardization:** Renamed columns to **snake case** for better readability and documentation.
- **Feature Engineering:**
    - Created **age_group** column by binning customer ages.
    - Created **purchase_frequency_days** column from purchase data.
- **Data Consistency Check:** Verified if **discount_applied** and **promo_code_used** were redundant; dropped **promo_code_used.**
- **Database Integration:** Connected Python script to PostgreSQL and loaded the cleaned DataFrame into the database for SQL analysis.

4. Data Analysis using SQL (Business Transactions)

We performed structured analysis in PostgreSQL to answer key business questions:

1. **Revenue by Gender** – Compared total revenue generated by male vs. female customers.

	gender text	revenue numeric
1	Female	75191
2	Male	157890

2. **High-Spending Discount Users** – Identified customers who used discounts but still spent above the average purchase amount.

	customer_id bigint	purchase_amount bigint
1	2	64
2	3	73
3	4	90
4	7	85
5	9	97
6	12	68
7	13	72
8	16	81
9	20	90
10	22	62
11	24	99

Total rows: 839 | Query complete 00:00:

3. **Top 5 Products by Rating** – Found products with the highest average review ratings.

	item_purchased text	Average Product Rating numeric
1	Gloves	3.86
2	Sandals	3.84
3	Boots	3.82
4	Hat	3.80
5	Skirt	3.78

4. **Shipping Type Comparison** – Compared average purchase amounts between Standard and Express shipping.

	shipping_type text	round numeric
1	Standard	58.46
2	Express	60.48

5. **Subscribers vs. Non-Subscribers** – Compared average spend and total revenue across subscription status.

	subscription_status text	total_customers bigint	avg_spend numeric	total_revenue numeric
1	Yes	1053	59.49	62645.00
2	No	2847	59.87	170436.00

6. **Discount-Dependent Products** – Identified 5 products with the highest percentage of discounted purchases.

	item_purchased text	discount_rate numeric
1	Hat	50.00
2	Sneakers	49.66
3	Coat	49.07
4	Sweater	48.17
5	Pants	47.37

7. **Customer Segmentation** – Classified customers into New, Returning, and Loyal segments based on purchase history

	customer_segment text	Number of Customers bigint
1	Loyal	3116
2	New	83
3	Returning	701

8. **Top 3 Products per Category** – Listed the most purchased products within each category.

	item_rank bigint	category text	item_purchased text	total_orders bigint
1	1	Accessories	Jewelry	171
2	2	Accessories	Sunglasses	161
3	3	Accessories	Belt	161
4	1	Clothing	Blouse	171
5	2	Clothing	Pants	171
6	3	Clothing	Shirt	169
7	1	Footwear	Sandals	160
8	2	Footwear	Shoes	150
9	3	Footwear	Sneakers	145
10	1	Outerwear	Jacket	163
11	2	Outerwear	Coat	161

9. **Repeat Buyers & Subscriptions** – Checked whether customers with >5 purchases are more likely to subscribe.

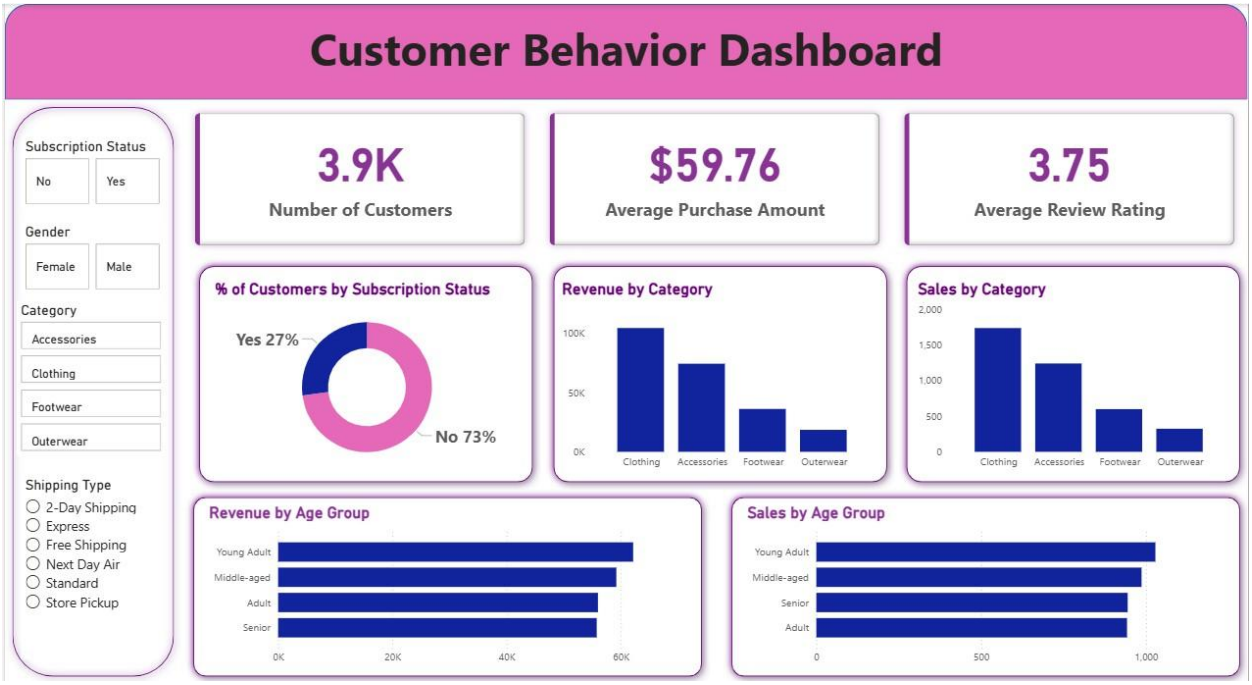
	subscription_status text	repeat_buyers bigint
1	No	2518
2	Yes	958

10. **Revenue by Age Group** – Calculated total revenue contribution of each age group.

	age_group text	total_revenue numeric
1	Young Adult	62143
2	Middle-aged	59197
3	Adult	55978
4	Senior	55763

5. Dashboard in Power BI

Finally, we built an interactive dashboard in **Power BI** to present insights visually.



6. Business Recommendations

- **Enhance Subscription Growth:** Proactively promote the exclusive benefits and value propositions offered to subscribers to increase enrollment and retention.
- **Implement Customer Loyalty Initiatives:** Establish programs designed to reward frequent and repeat buyers, strategically encouraging their transition into the high-value "Loyal" customer segment.
- **Optimize Discount Strategy:** Conduct a comprehensive review of the current discount policy to ensure a critical balance between maximizing sales volume and maintaining acceptable profit margins.
- **Refine Product Positioning:** Strategically highlight and feature top-rated, high-demand, and best-selling products in marketing campaigns to leverage proven popularity.
- **Execute Targeted Marketing Campaigns:** Direct marketing efforts toward the identified high-revenue age demographics and customers who frequently utilize express shipping services for a greater return on investment.
